

OUR SECURITY SYSTEMS MAKE IT EASY

Control Model Capabilities

The 2000 Series consists of 4 models to fit your needs:

- D2412UE** 6 on-board points, 2 relays, UPLINK™
- D2412U** 6 on-board points — expandable to 24, 2 relays, UPLINK™
- D2212BE** 8 on-board points (2 unsupervised), 2 relays
- D2212B** 8 on-board points (2 unsupervised) — expandable to 24, 2 relays

A few of the many benefits you'll derive from the 2000 Series...

- Technicians are factory trained
- Exit momentarily without turning entire system off
- Issue one-time passcodes for service personnel
- System is up even when phone line is down*
- Wireless system provides convenience and savings
- Text keypads are easy to use and understand
- System manages up to eight users, each with their own passcode

Radionics®

INTELLIGENT SECURITY

Radionics®

*UPLINK™ uses Cellemetry™ cellular telephone network technology. Check with your salesperson for availability in your area. Cellemetry is a service mark of Cellemetry L.L.C.

The system and products described in these pages are typical, but may not be the options you decide to select. We will work with you to design a system to meet your unique needs, using the most adaptable equipment in the alarm industry.

EASILY CONTROL YOUR SECURITY

(Models D2412UE, D2412U, D2212BE, D2212B)

Convenient, intelligent security. The Radionics 2000 Series Security Control/Communicators deliver convenience and intelligence.

These controls collect information from door, window, motion and other sensors located in your office, and communicate unusual occurrences to a monitoring station which calls quickly for help.

The 2000 Series offers unique and practical security features, many of which are one-button operations — they couldn't be easier to use!

Get a Professional Response

The best equipment maintained at a high level is still only as good as the response you get in an emergency. Highly-trained professionals at the monitoring facility are ready to respond 24 hours a day, 365 days a year.

Want to Step Outside?

Go ahead. Now when a back door delivery arrives or you're working late and need to step outside for a moment, our "Step Outside" feature allows you to temporarily turn off a door's protective status by touching the CLEAR button without turning off the rest of the system. When you've closed the door, press CLEAR once more and the door is secured again.

EXCELLENCE IN SECURITY

Your System is Up Even When Your Phone Line is Down

Certain 2000 Series models are available with UPLINK™*, a feature that allows an alarm signal to reach your monitoring station even when your phone line is down. UPLINK™* gives you all of the advantages of traditional cellular radio technology such as widespread availability, easy installation, two-way communications, and none of the disadvantages like expensive hardware and air time. By making this feature so affordable, no one needs to be without this extra protection anymore.

The Savings & Convenience of a Wireless System

The 2000 Series has the ability to support wireless motion detectors, contacts and keypads. This will save you money on installation costs, as it eliminates the need to run wiring from each device to the control. A wireless keypad allows you to turn your system on or off from outside the protected premises, providing greater convenience as well as security. Three wireless keypads are available. One is a 4-button keyfob that easily fits on a keychain. Now turning your system on or off, sending a panic report, opening a door, and turning on a light, is as easy as reaching in your pocket and pressing a button.

You Deserve the Best

Advent's business and reputation rest on the reliability of the equipment we install. We are confident that the Radionics equipment we put into the offices of our customers is quite simply the best available. In this industry, we cannot risk being second-best.

Look for Factory-Trained Technicians

Advent's installers and service people are certified at the Radionics Technical Training School. Only technicians who pass strict tests on each product are issued certificates that authorize them to install the equipment.

Saving You Money with Simplicity

The 2000 Series panels are compatible with text keypads. These keypads have built-in help to guide you when using your system. Not only will these keypads make securing your office a snap, they'll also save you money. The ease of these keypads makes costly, user-error false alarms a thing of the past. LED keypads are also available.

Passcodes Keep You In Control of Your Security

The 2000 Series panels allow you to issue one-time passcodes for a single-entry visitor such as a maintenance worker or other service personnel. You also have up to eight different passcodes available for regular employees or frequent guests. Enjoy the comfort of knowing you're always in control of your company's security.
